Supplement Guide

Version 2.0 • Part A

Educational Guide for AI Fitness Trainer (LangChain + RAG)

Table of Contents

- ✓ 1. What Are Supplements?
- ✓ 2. When Should You Use Supplements?
- ✓ 3. Evidence-Based Supplements
- ✓ 4. Supplement Safety
- ✓ 5. Common Myths

1. What Are Supplements?

- Supplements support a healthy diet; they do not replace food.
- They may help fill nutritional gaps.
- Choose products from reputable manufacturers.
- Use supplements only when appropriate for your goals.

■ Expert Tip
Food quality and training are always the foundation.

2. When Should You Use Supplements?

- If you struggle to meet protein needs.
- If a healthcare professional identifies a deficiency.
- When your training goals justify additional nutritional support.
- After optimizing sleep, diet and training.

■ Expert Tip
Don't buy supplements before building consistent habits.

3. Evidence-Based Supplements

Supplement	Main Benefit	Typical Use
Whey Protein	Meet protein goals	Post-workout or anytime
Creatine Monohydrate	Strength & power	3–5 g daily
Vitamin D	Bone & immune health	If deficient or advised

Fish Oil	Omega-3 intake	If dietary intake is low
Caffeine	Performance	Before training if suitable

4. Supplement Safety

- Follow label directions.
- Do not exceed recommended servings.
- Check for third-party testing where available.
- Consult a healthcare professional if pregnant, under 18, or taking medication.

■ Expert Tip
Quality matters more than marketing.

5. Common Myths

- Myth: Supplements build muscle without training.
- Myth: More supplements mean better results.
- Myth: Natural always means safe.

■ Expert Tip
Evidence beats social media trends.

Supplement	Taking?	Notes
Whey	■	
Creatine	■	
Vitamin D	■	
Fish Oil	■	
Magnesium	■	

FAQ

Q: Do I need supplements?

A: Not necessarily. Diet comes first.

Q: Can I take all supplements together?

A: It depends on the supplement and your situation.

Q: Are supplements medicines?

A: No. They are intended to supplement the diet.
